

WinSCP

1. I went to google and typed WinSCP from WinSCP.net and clicked downloaded tab and selected the latest installation, and I clicked download the latest version of WinSCP and the size file and click on the green button to download the file.

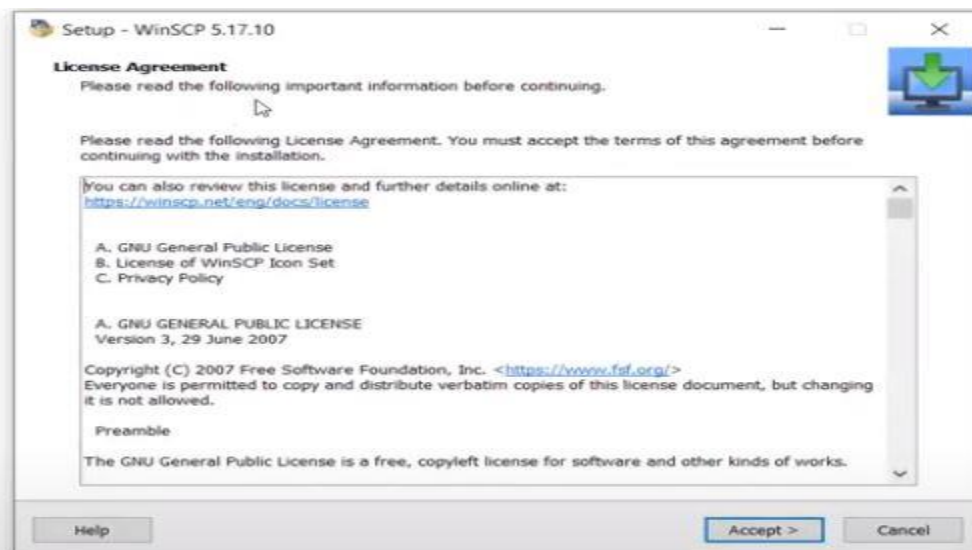

2. after it downloaded you can investigate your downloads. Now I double clicked on the setup the to start installation, and I was given two options but selected to install for all users (recommendation)

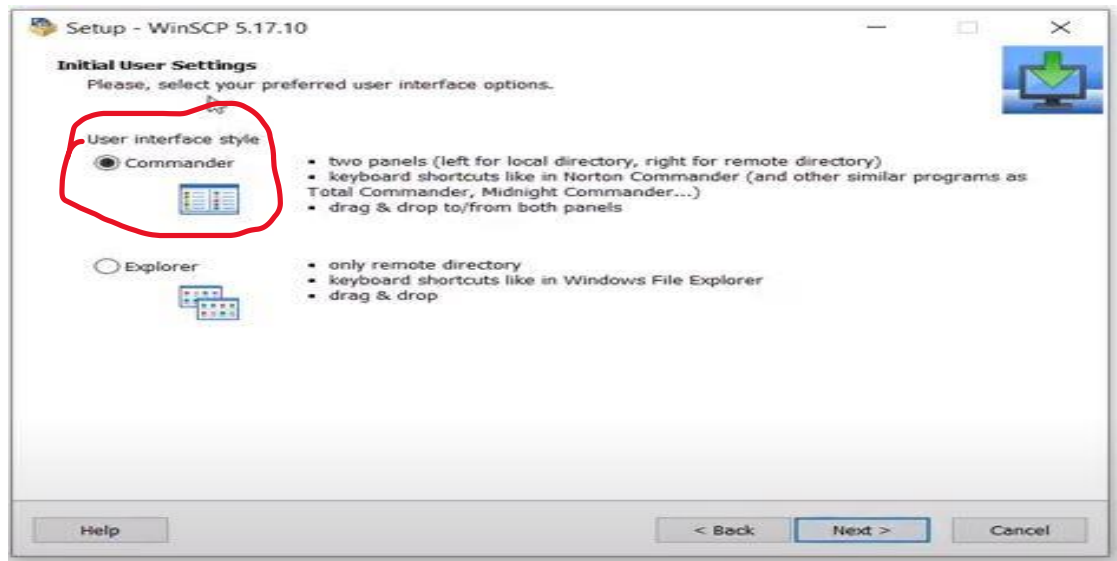

I was given license agreement I read it I click agree and accept

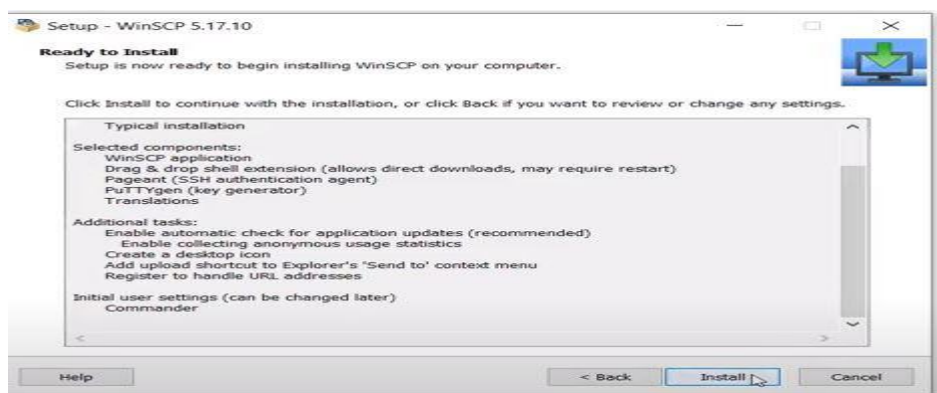

3.

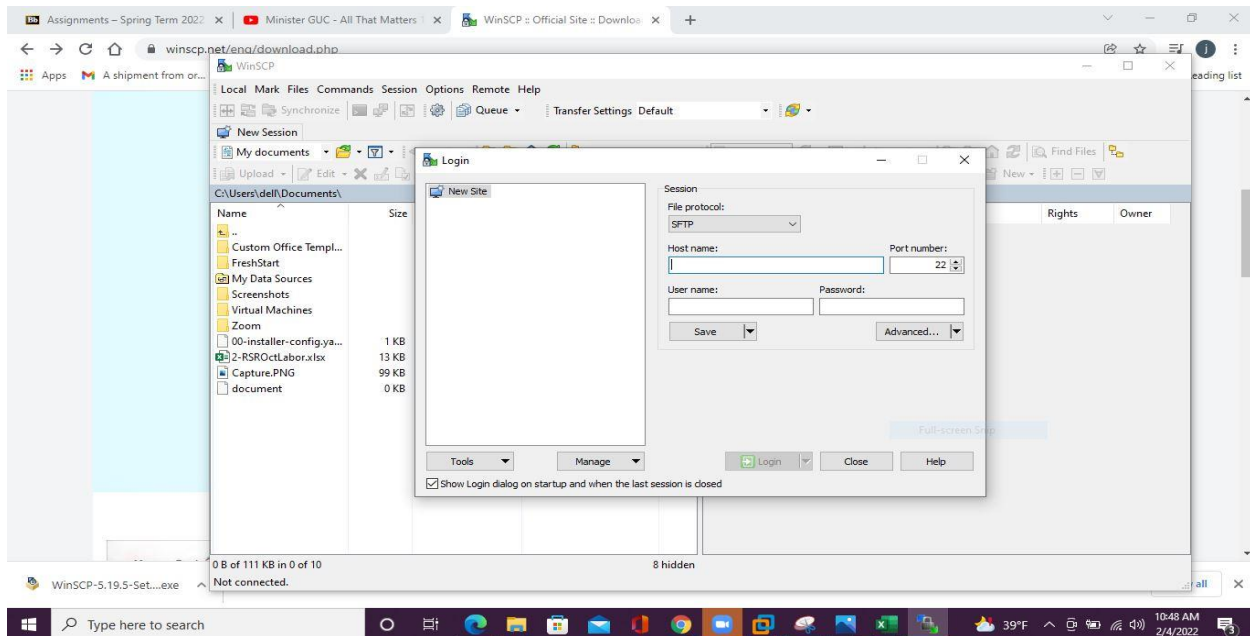

4. Here I was given two choices of setup type and chose user interface style commander which provides two panels the left is for windows local directory and on the right side for remote directory.

5. Here I was all set, and I went ahead and began to install WinSCP on my computer and clicked install

6. I open my first window is the server manager window, I filled in the information host name and Ip address and the password of any of ubuntu server. Once I was in, I was able to see all the files I have created in my server side and on my window machine side. I have already created a file in my ubuntu server named 'document' and my CentOS 'History' which I shared with my window machine by dragging it from right and dropped it to the left side. This can only be done or shared between the server and windows machine.

7. Both of my ubuntu and CentOS servers were able to transfer the files safely to winscp and they are found on the left hand side of the local directory (blessed.txt for ubuntu and CentOS History)

7a

WinSCP window showing a file transfer session between a local Windows machine and a remote Ubuntu machine.
